

WO9215170

Publication Title:

METHOD AND APPARATUS FOR GENERATING DIGITAL, ANGLED
HALFTONE SCREENS

Abstract:

Abstract of WO9215170

In digital halftone color printing, low spatial frequency patterning can occur due to the interaction of the overlapping angled halftone screens. The moire patterning can be minimized by automatically constructing digital halftone angled screens (110) from screen tiles (8) which are designed to minimize the low spatial frequency patterning.
